# Chapter 1

## Introduction

### 1.1 Figure Examples

#### 1.1.1 One Figure

Figure 1.1 shows Pluto's image captured by New Horizons.

**Figure 1.1:** Long description of figure 1 (Pluto captured by New Horizons). Note: there is a short description which will show on your list of figures. Image taken from <https://images-assets.nasa.gov/image/PIA19708/PIA19708~orig.jpg>.

### **1.1.2 One Horizontal Figure**

Figure 1.2 is an example of landscape image, which is Ultima Thule captured by New Horizons extended mission.

**Figure 1.2:** Long description of figure 1.2 (Ultima Thule captured by New Horizons). Note: there is a short description which will show on your list of figures. Note: in the `\includegraphics` command, use `\linewidth` instead of `\textwidth` to occupy almost the entire field of view. Image taken from [https://solarsystem.nasa.gov/system/news\\_items/main\\_images/819\\_MU69\\_1600.jpg](https://solarsystem.nasa.gov/system/news_items/main_images/819_MU69_1600.jpg).

### 1.1.3 A Set of Subfigures

Figure 1.3 is an example of a set of subfigures. You can cite the panels individually: Figure 1.3a, Figure 1.3b, and Figure 1.3c.

(a) Caption 1.

(b) Caption 2.

(c) Caption 3.

**Figure 1.3:** Long description of figure 1.3.

## 1.2 Citing Chapters

Chapter 2 has the citations in the Astrophysical Journal<sup>1</sup> (ApJ) style, it also shows how to use a long table. Chapter 3 has a normal table.

---

<sup>1</sup><https://iopscience.iop.org/journal/0004-637X>

## Chapter 2

# Chapter with Citation in ApJ Style

**Abstract** Put your abstract in.

### 2.1 Citation Examples

You can cite a reference using `\citet{}`, `\citep{}`, and `\citealp{}`. They will look like this:

Ren et al. (2018),

(Ren et al., 2018),

and Ren et al., 2018.

You can just copy the AAS bibtex entires from ADS<sup>1</sup>, and paste them in the .bib file.

### 2.2 Equation and Table Examples

This is your section alpha.

---

<sup>1</sup><https://ui.adsabs.harvard.edu>

### 2.2.1 Equation

This is an equation sample taken from Ren et al. (2018):

$$T_{\text{NMF}} = D_{\text{NMF}} + S_{\text{NMF}}, \quad (2.1)$$

where the subscript  $\text{NMF}$  means performing the NMF modeling result for the stellar signal ( $S$ ) or disk signal ( $D$ ) alone.

You can refer to the equation as Equation (2.1).

### 2.2.2 Long Table

Table 2.1 is part of a long table that was previous presented in an ApJ paper (Ren et al., 2018). The format was changed from the deluxetable style in ApJ.

**Table 2.1:** List of Symbols

Symbol	Expression	Dimension	Meaning
$\circ$	$(A \circ B)_{ij} = A_{ij}B_{ij}$		Element-wise (Hadamard) multiplication for matrices $A$ and $B$ of same dimension.
$D$		$1 \times N_{\text{pix}}$	Flattened image of the astrophysical signal (i.e., no stellar information).
$\hat{D}$	$T - \hat{f}T_{\text{NMF}}$	$1 \times N_{\text{pix}}$	Reduced best image of the astrophysical signal ( $D$ ), obtained from BFF procedure.
$D_f$	$T - fT_{\text{NMF}}$	$1 \times N_{\text{pix}}$	Reduced image of the astrophysical signal with scaling factor $f$ .
$D_{\text{NMF}}$	$\omega^{(D)}H$	$1 \times N_{\text{pix}}$	NMF model of the astrophysical signal ( $D$ ).
$\delta(\cdot)$			The change of the $(\cdot)$ item after one iteration.

(continued)

Table 2.1 – (continued)

Symbol	Expression	Dimension	Meaning
$F_{\text{disk}}/F_{\text{star}}$			Flux ratio between the disk and the star.
$f$			Scaling factor, where $0 < f < 1$ .
$\hat{f}$			Optimum scaling factor obtained from the BFF procedure, corresponding with $\hat{D}$ .
$H, H^{(k)}, H^{(k+1)}$	$[H_1^T, \dots, H_n^T]^T$	$n \times N_{\text{pix}}$	NMF component matrix for the reference cube.
$H_1, H_i, H_n$		$1 \times N_{\text{pix}}$	The 1-st, $i$ -th, and $n$ -th NMF component for the reference cube ( $R$ ).
$(\cdot)^{(k)}, (\cdot)^{(k+1)}$	superscript		Iteration step number.
$\mu_f^{(k)}$			The median of the pixels in $D_f$ at iteration step $k$ .
$N_{\text{pix}}$			Number of pixels in each image.
$N_{\text{ref}}$			Number of images in the reference cube ( $R$ ).

The above table crosses different pages automatically. If you find a way to use the deluxetable directly, please do not use this format since it takes a few minutes to do the conversion.

## 2.3 Appendix

This is your appendix for this chapter.

## References

Ren, B., L. Pueyo, G. B. Zhu, J. Debes, and G. Duchêne (2018). “Non-negative Matrix Factorization: Robust Extraction of Extended Structures”. In: *The Astrophysical Journal* 852, 104, p. 104. DOI: [10.3847/1538-4357/aaa1f2](https://doi.org/10.3847/1538-4357/aaa1f2). arXiv: [1712.10317](https://arxiv.org/abs/1712.10317) [astro-ph.IM].

## Chapter 3

# Another Chapter in *ApJ* Style

Note: if you want italic font in your chapter title, use `\{ }` rather than `\it{ }` to have a better formatting in the Table of Contents.

**Abstract** This is your abstract.

### 3.1 Table example

Table 3.1 has been presented in Ren et al. (2017). It is not presented in Ren et al. (2018). I am citing two references just to show you that the Reference section for this table will have two entries.

In the .bib file, you do not have to arrange the entries by their citation order! And you can add more entries—they will **not** appear on the References section as long as you don't cite them.

**Table 3.1:** Summary of Public *HST*/STIS Observations as of Dec. 2016.

	Proposed Aperture Name	Number of Flat-Fielded Files
1	BAR10	116
2	<b>WEDGE A0.6</b>	<b>228</b>
3	<b>WEDGE A1.0</b>	<b>493</b>
4	WEDGE A1.8	86
5	WEDGE A2.0	39
6	WEDGE A2.5	1
7	WEDGE A2.8	5
8	WEDGE B1.0	37
9	WEDGE B1.8	8
10	WEDGE B2.0	9
11	WEDGE B2.5	116
12	WEDGE B2.8	5
